

Interview Introduction Script

Md. Alif Hossen | Full-Stack Software Developer

"Okay, so I am assuming you have already gone through my resume, so I will try to tell about myself what I have not mentioned here so far. From early days in school, I had great interest solving problems practically with in-hand experience rather than learning theories. Over the time, I became familiar with lots of tools and technologies, and that's how one day I found myself in the world of web technologies. As my dream was to solve and work with real-life problems, I started to learn these things deeper and have been more passionate about it day by day.

In terms of my technical background, I specialize in the modern web ecosystem. My core stack includes **TypeScript, Next.js, and React** for the frontend, while on the backend, I work with **Node.js and Express**. I have traditionally worked extensively with **MongoDB**, but recently, I've been transitioning my focus toward **PostgreSQL** for more complex architectural needs. I am also currently expanding my expertise into cloud infrastructure, specifically focusing on **AWS services like EC2, S3, and Lambda**, as I am working toward mastering system design.

I had great opportunity like **Top Sound**, an e-commerce platform that marked my first professional success and taught me the complexities of managing real-world transactions and inventory management. Later I expanded my expertise with **Dentcare**, an AI-based platform designed for dental care services where I focused on integrating intelligent features into web environments to streamline patient care. More recently, I pushed my technical limits during the **SOLVIO AI Hackathon**, where I achieved a top 100 ranking by architecting an AI Voice system specifically tailored for grocery shop operations. Whether I am exploring new database structures or optimizing custom typography for accessibility, these experiences have refined my ability to deliver high-quality code under pressure. I am now eager to apply these practical problem-solving skills to new and impactful projects."
